## THREE NEW MROpen EVO IN USA

### **US Radiology Specialists Enhances Imaging Capabilities at its American Health Imaging Centers in Alabama & Georgia with the Addition of New MROpen EVO MRI Systems from ASG Superconductors**

RALEIGH, NORTH CAROLINA & MORTON GROVE, ILLINOIS –December 6, 2022 – [US Radiology Specialists, Inc.](#), one of the nation's premier physician-owned radiology practices, is adding new imaging technology to allow for more comfortable MRIs for patients at its [American Health Imaging \(AHI\)](#) facilities via the installation of three [MROpen EVO](#) systems from ASG Superconductors – a leading provider of open MRI technology.

The best-in-class MROpen EVO system allows MRI scans to be completed on patients in a wide array of seated, standing, bent, or reclined positions. The technology's unique cryogen-free system does not require patients to be confined to a conventional MRI machine's traditional horizontal cylindrical space during procedures.

The new MROpen EVO machines US Radiology is adding at its Atlanta, Georgia, and Birmingham, Alabama AHI outpatient imaging centers will augment similar imagers already in use at the company's Decatur, Georgia, and San Antonio, Texas centers.

"We are excited to be working with a leader in open MRI technology like ASG Superconductors to help expand access to imaging services and enhance the patient experience at our outpatient imaging centers," said Wayne Orvis, Chief Operating Officer at US Radiology. "We know that early detection and informative imaging are critical to ensuring better overall healthcare outcomes. Open MRI technology helps ensure more patients and providers get the imaging services they need to make key health decisions, particularly those that might otherwise have difficulty completing an exam due to claustrophobia, body size, or other issues that can affect traditional MRI exams. We look forward to continuing to add more open MRI capability across our national network in the future."

Stefano Gazzo, CEO of ASG Superconductors USA, stated, "We are very proud that a leading player such as US Radiology Specialists decided to invest further in our MROpen EVO system. We work every day to expand our presence in North America by supporting imaging centers in providing the best MRI experience and increasing access to the most advanced upright open MRI technology available."
